1. **Abstract:** The Integrated Surface Hourly (ISH) database is composed of worldwide surface weather observations from about 20,000 stations, collected and stored from sources such as the Automated Weather Network (AWN), the [Global Telecommunications System](#) (GTS), the [Automated Surface Observing System](#) (ASOS), and data keyed from paper forms. Most digital observations are decoded either at operational centers and forwarded to the Federal Climate Complex (FCC) in Asheville, NC, or decoded at the FCC. The US Air Force Combat Climatology Center (AFCCC), the National Climatic Data Center (NCDC), and the US Navy's Fleet Numerical Meteorological and Oceanographical Command Detachment (FNMOD), make up the FCC in Asheville. Each agency is responsible for data ingest, quality control, and customer support for surface climatological data. All data are now stored in a single ASCII format. Numerous DoD and civilian customers use this database in climatological applications.

ISH refers to the digital database and format in which hourly and synoptic (3-hourly) weather observations are stored. The format conforms to Federal Information Processing Standards (FIPS). The database includes data originating from various codes such as synoptic, airways, METAR (Meteorological Routine Weather Report), and SMARS (Supplementary Marine Reporting Station), as well as observations from automatic weather stations. The data are sorted by station-year-month-day-hour-minute. This document provides documentation for the database and its format.

ORIGINAL-OBSERVATION-ELEMENT-QUALITY parameter code  
The code that denotes the type of parameter that the supplemental-level-element-quality applies to.  
DOM: A specific domain comprised of the characters in the ASCII character set.

First 4 characters = the element name as defined below. Position 5 = the Flag 1 value as defined below. Position 6 = Flag 2 value as defined below.

Element names and definitions =

ALC - Sky condition in tenths from ASOS  
ALM - Sky condition in eighths from ASOS  
ALTP - Altimeter setting  
CC51 - Sky condition prior to 1951  
CLC - Sky condition in tenths  
CLM - Sky condition in eighths  
CLHT - Ceiling height  
CLT - Cloud type and height by layer  
C2C3 - Total cloud cover by first 2 and first 3 layers

 U Unlimited ceiling height (DATA-VALUE = 99999). (CLHT)  
 b (blank) Flag not needed. (All elements except CC51)

FLAG-2 (Data Quality Flag Value) =

0 Observed data has passed all internal consistency checks.  
 1 Validity indeterminable (primarily for pre-1984 data).  
 2 Observed data has failed an internal consistency check - subsequent edited value follows observed value.  
 3 Data beginning January 1, 1984 - observed data has failed a consistency check - No edited value follows.  
 Data prior to 1 Jan 84 - observed data exceeded preselected climatological limits during conversion from historic TD-1440 files. No edited value follows.  
 4 Observed data value invalid - no edited value follows.  
 5 Data converted from historic TD-1440 exceeded known climatological extremes - no edited value follows.  
 E Edited data value passes all system checks - no observed value present.  
 M Manually edited data value added to data set after original archival. Automated edit not performed on this item.  
 S Manually edited data passes all system checks.
